

# Experience the **G-Force** in our **G3** Equipment

# Experience the **G-Force** in our **G3** Equipment

## Gentler water with the latest technology

G3 employs the latest water care technologies, Ultra-Violet and Ozone, to reduce the level of chlorine usage by up to 80% while producing crystal clear gentler water.

## Experience the G-Force

A Gib-San G3 System performs to maximum efficiency and reliability because of Gib-San's high quality G3 equipment standards combined with our high performance Heritage installation standards. Gib-San Heritage experience is based on over 50 years of building and servicing swimming pools. Gib-San's G3 Pool & Spa Systems respect the three pillars of our ISO commitment -- Quality, Health & Safety for our clients and employees, and Environmental Sensitivity.

## G3 Equipment is so good we put our name on it!

G3 specifications offer the best quality in the industry. Match that with our ability to get the best performance results and ease of operation. The more complex the water features the more important the installation is to minimize resistance within the system. We add even more value by finetuning G3 equipment as required and including added accessories or warranty when purchased with the Heritage Extended Warranty package.

## Automation for ease of operation

Control systems operate virtually all maintenance functions of your pool and spa with the convenience of your smart phone -- from maintaining chemical balance, operating lighting and water features, to scheduling selected temperatures.

Even pool cleaning can be automated with the G3 In-Floor Cleaning System that maintains an overall cleaner pool with a system of pop-up nozzles that direct debris to a special collection zone.
